

FINISHES, COLORS & OPTIONS

CycleShield® Powder Coat Finish

The CycleShield finish is provided as standard on our high performance doors. This specialized powder coating system features a low coefficient of friction wear-resistance, and includes a base coat consistent with ASTM A653. A zirconium pre-treatment is applied, followed by a rust-inhibiting, baked-on polyester powder coat.

- Friction and wear-resistant composition for high-cycle applications
- Rust inhibiting and resistant to acids, alkalis and oils at normal temperatures
- Recommended for exterior, corrosive and/or abrasive environments
- For a more durable finish, upgrade to CycleShield® Ultra

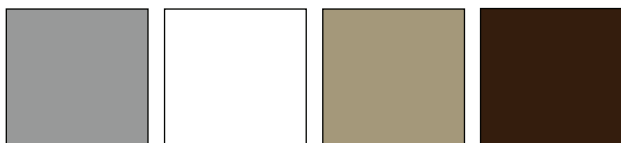

Due to inherent differences in production processes, color representations should be used as guidelines only. When color is critical, contact the factory for a sample.

GalvaNex® Finish

GalvaNex is our exclusive finish provided as standard on steel curtains and hoods. This cost-effective finish includes an ASTM A653 galvanized base coating, which is treated with dual process rinsing agents. This prepares the door for a chemical bonding baked-on base coat and baked-on polyester enamel finish coat.

- Available in Gray, Tan, White or Brown
- Superior resistance to corrosion and abrasion
- Suitable as a finish coat
- Other door components (guides, bottom bars and brackets) provided with matching powder coat finish
- For a more durable finish, upgrade to GalvaNex Ultra

Color and gauge availability vary by product. Consult the factory for more information.

SpectraShield® Powder Coat Finish

SpectraShield is an environmentally friendly, factory-applied polyester powder coat option that adds aesthetic value. Layered on top of the standard GalvaNex finish, the SpectraShield finish includes a zirconium pre-treatment followed by a baked-on polyester powder coating.

- Available in a palette of more than 180 standard RAL colors
- Custom colors are available to meet the designer's vision
- Can be applied to steel or aluminum components
- For a more durable finish, upgrade to SpectraShield Ultra

For a more durable finish, consider upgrading to Galvanex® Ultra™, SpectraShield® Ultra™ or CycleShield® Ultra powder coat finish.

Featuring a polyester-based, textured, wear-resistant clear coat, these finishes provide improved durability against deterioration and/or marring of the curtain during regular use. Galvanex Ultra, SpectraShield Ultra, and CycleShield Ultra offer a limited 50,000 cycle/2 year warranty against wear and tear along with a 5 year warranty against flaking, cracking, blistering, peeling and fading.
